COMPANY OVERVIEW

A Source Manufacturer Built for Flexible Cooperation

Guangzhou-based manufacturing, development support and partner-ready OEM/ODM execution.

Guangdong Sky Blue Life Science Co., Ltd. is a manufacturing and product-development company based in Huangpu District, Guangzhou, China. We combine production, product development, quality coordination and commercial support for lyophilized products, skincare biotechnology applications and private-label programs.

~3,000 m² Manufacturing site	**Class 100,000** Clean workshop	**2** Production lines	**50+** Production staff
20 R&D / design staff	**8** Core business functions	**OEM/ODM** Private-label service	**Guangzhou** China source base

What partners gain

Direct access	Communicate with the manufacturing side instead of adding layers of domestic and overseas intermediaries.
Flexible development	Discuss specification, format, fill weight, presentation, packaging and private-label requirements around the target market.
Commercial room	Receive confidential introductory and volume-based quotations designed to protect partner margin.
Long-term support	Move from trial samples to recurring supply with aligned documentation, packaging and production planning.

Our positioning: a practical source-manufacturing partner for companies that want better purchasing control, clearer communication and scalable supply.

FACTORY EVIDENCE

Factory & Manufacturing Environment

A real production base supported by laboratory and quality-control environments.

Manufacturing base in Huangpu District, Guangzhou, China

Laboratory, production and quality-control environment shown in the company brochure

Project verification: specific production-line capability, testing scope, documentation and lead time are confirmed against the agreed SKU before order placement.

DEVELOPMENT SCOPE

Product & Private-Label Capabilities

A flexible cooperation model for lyophilized formats and related biotechnology applications.

Representative lyophilized vial format from the company's product portfolio

Lyophilized formats	Freeze-dried cosmetic powder, vial presentations, matched companion serum or diluent concepts where applicable, and set-based retail formats.
Bioactive development	Peptide technology, Type III collagen applications, exosome-related research and other bioactive development areas described in the company's R&D scope.
OEM / ODM	Specification discussion, product development, sample confirmation, packaging coordination, private label and scaled manufacturing.
Flexible customization	Discuss fill weight, vial format, pack count, visual identity, label content and market-specific presentation requirements.

Important: product eligibility, claims, labeling and documentation depend on intended use and the destination market. These are reviewed before quotation and production.

OEM / ODM

A Clear Path from Requirement to Delivery

Each project is qualified around specification, intended use, quantity, packaging and destination.

STEP	PARTNER INPUT	FACTORY OUTPUT
01	Target product, intended use and destination	Feasibility review and clarification list
02	Specification, format, quantity and test needs	Sample plan, MOQ, lead time and tiered quotation
03	Packaging, label and private-brand requirements	Packaging route and artwork / label coordination
04	Sample approval and commercial confirmation	Confirmed specification, production plan and payment terms
05	Purchase order and shipping instructions	Manufacturing, agreed quality release and shipment coordination

Information needed for an accurate quotation

Product	SKU name, intended use, target purity or specification, fill weight and format
Volume	Trial quantity, expected monthly volume and 3-6 month forecast if available
Packaging	Bulk, unlabeled, private label, box/set configuration and artwork status
Quality	Required test methods, document package and acceptance criteria
Logistics	Destination country, requested Incoterm and target delivery date

Why we do not publish one fixed price: the true factory quotation changes with specification, testing, packaging, order size and destination. A confidential project quote is more accurate and more competitive.

QUALITY & DOCUMENTATION

Responsible Supply, Clear Project Qualification

Documentation is matched to the agreed product category, specification and market.

Our approach is to confirm what the buyer requires before production, document the agreed specification, and align the release package with the product and contract. The exact testing and document set must be confirmed for each SKU rather than assumed from a generic brochure.

DOCUMENT / CHECK	TYPICAL PURPOSE	PROJECT STATUS
Product specification	Defines agreed identity, format and acceptance requirements	Confirmed before order
Certificate of Analysis	Reports agreed batch-specific quality results	Where applicable and contracted
HPLC / MS data	Supports identity or purity assessment for relevant materials	Subject to SKU and test scope
Safety Data Sheet	Supports handling, storage and logistics review	Where applicable
Packaging specification	Confirms vial, closure, label, box and pack configuration	For custom / private-label projects
Batch-related records	Supports release and traceability expectations	Defined in the supply agreement

Responsible-use boundaries

Research materials: supplied only for lawful laboratory research use when applicable. They are not represented for human or veterinary use unless legally approved and supplied through an authorized pathway.

Cosmetic products: ingredient, claim, label and market-entry requirements are reviewed for the destination market before a final commercial commitment.

COMMERCIAL COOPERATION

Factory-Direct Pricing That Protects Partner Margin

Start with a qualified trial; scale with transparent volume tiers and clear supply terms.

Because you work directly with the manufacturing side, we can evaluate an introductory offer and volume-based price structure without adding unnecessary trading layers. Our goal is a sustainable price that remains attractive to the buyer while supporting stable quality and repeat supply.

STAGE	COMMERCIAL FORMAT	PARTNER BENEFIT
Trial	Sample or small first order after specification review	Lower-risk quality and packaging evaluation
Growth	Recurring orders with confirmed SKU and forecast	Improved unit pricing and production planning
Scale	Volume order or longer-term supply arrangement	Optimized tier, packaging and delivery coordination

Request your confidential factory quote

1. Send	SKU list, specification, quantity, packaging and destination
2. Review	Factory confirms feasibility, MOQ, sample route, documents and lead time
3. Quote	Receive trial, growth and volume pricing where suitable
4. Confirm	Approve sample, commercial terms and production schedule
